## VACCINE DOSE AND BOOSTERS

Vaccines Are Widely Available for everyone 5 years and older

Children ages 5 years and older can now get Pfizer-BioNTech COVID-19 vaccines.

### Third Dose

Who will need a third dose includes:

- Adults aged 65 and up
- Those who are at risk of exposure through their work
- Those who are immune-compromised or are on any medication or treatment that makes their immune responses insufficient
- Those people, the original dose levels don't seem to be enough.

### Booster Dose

- The recent emergence of the Omicron variant further emphasizes the importance of vaccination, boosters, and prevention efforts needed to protect against COVID-19.
- Data from clinical trials showed that a booster shot increased the immune response in trial participants.

Children 5-11 years and older can now get Pfizer-BioNTech vaccines.

Vaccinating children can help protect family members, including siblings who are not eligible for vaccination and family members who may be at increased risk of getting very sick if they are infected
